The decision to have your teeth straightened with Invisalign® can be life changing. Straightening your teeth not only enhances your smile but also makes cleaning your teeth easier and more effective, protecting your dental health. Our team has extensive experience of helping patients enjoy the many benefits of a beautiful smile and will create a bespoke treatment plan to suit you, ensuring that you are fully informed and comfortable every step of the way.

This guide highlights the key facts about Invisalign teeth straightening, however, only a personal consultation can confirm whether Invisalign is right for you.

Why Choose Invisalign?

When you think of teeth straightening do you only think of metal braces? If so, it's time to take a second look, it will have to be a really close look as Invisalign aligners are almost invisible.

Featuring innovative SmartTrack® technology, Invisalign straightens your teeth through a series of transparent plastic aligners that safely and predictably move your teeth, correcting over-crowding, closing gaps and straightening your teeth to give you a great looking smile.

Invisalign Key Facts

- To determine whether Invisalign is right for you we provide a free consultation with one of our experienced dentists
- From the beginning of your Invisalign journey you will have a digital view of how your teeth will look after treatment through state-of-the-art ClinCheck® Software
- Straightening is achieved by a series of transparent aligners worn in sequence over a period of weeks
- Bespoke Invisalign aligners are custom made to fit your exact gum line so you can comfortably wear them for the recommended 22 hours a day
- The average duration of Invisalign treatment is six-nine months, though you will typically start seeing results in a matter of weeks. The exact length of treatment depends on your specific needs
- Invisalign aligners are easily removed for teeth cleaning and do not require you to avoid certain foods
- Wearing a retainer after Invisalign treatment will ensure that your newly straightened teeth remain in the correct position. Typically, you'll wear your retainer full time for a short period and then transition to wearing it only at night. Many people will eventually graduate to just wearing their retainer a few nights per week, though this will depend on the advice of your dentist

- Invisalign teeth straightening can help protect your long-term oral health as straighter teeth are less likely to accumulate harmful plaque
- As part of your free initial Invisalign consultation, you will receive a free digital scan using our state-of-the-art iTero® scanner†. This innovative scanner not only creates computerised 3-D images of your teeth, it also shows you how they would look after Invisalign straightening
- The Invisalign SmileView™ app simulates your new smile on your mobile device

How Much Does Invisalign Cost?

Our prices are competitive and transparent. A full breakdown of the cost of your treatment will be included in your treatment plan to ensure you are fully informed before proceeding. We offer interest free financing to help spread the cost of your Invisalign treatment.
